(57) **ABSTRACT**

Examples of the present disclosure describe systems and  
methods of creating a conversational chat bot of a specific  
person. In aspects, social data (e.g., images, voice data,  
social media posts, electronic messages, written letters, etc.)  
about the specific person may be accessed. The social data  
may be used to create or modify a special index in the theme  
of the specific person's personality. The special index may  
be used to train a chat bot to converse in the personality of  
the specific person. During such conversations, one or more  
conversational data stores and/or APIs may be used to reply  
to user dialogue and/or questions for which the social data  
does not provide data. In some aspects, a 2D or 3D model  
of a specific person may be generated using images, depth  
information, and/or video data associated with the specific  
person.
